SUMMARY

I am an Economics Ph.D. candidate at Indiana University in Bloomington, Indiana, where I am scheduled to defend my dissertation and expect to graduate in the spring of 2024. My research in quantitative economics, climate policy, financial econometrics, and machine learning combines theory with the use of computational methods and large data sets. I seek to apply my analytical skills and experience in economic research to address complex problems, in collaboration with others.

SKILLS

Specialties: Quantitative Economics, Climate Policy, Financial Econometrics, Machine Learning

Methods: Factor Models, Quantitative General Equilibrium, Supervised Machine Learning Methods (Dimension Reduction, Regularization, Ensemble, Neural Net), Deep Learning, Model Evaluation, Data Visualization, Regression (Linear, Non-linear, Nonparametric), Predictive Modeling, Endogenous Markov Switching, Hat Algebra Technique, Calibration, Parallel Computing

Programming: Python (NumPy, Scikit-Learn, Matplotlib, Pandas, TensorFlow), MATLAB, R, Stata, High-performance Computing (Linux), SQL, MS Excel, L^AT_EX

Data Experience: World Input-Output Database Environmental Accounts; United Nations Statistical Division, Trade Analysis and Information System (UNCTAD-TRAINS); Eurostat; OECD-PINE; FRED-MD; Compiled Stock Returns Data (CRSP);

Workflow Experience: Slurm Workload Manager, Slate, ArcGIS, ICLEI ClearPath, Microsoft Teams, Slack, Citrix, Github

SELECTED RESEARCH PROJECTS

Title: “Evaluating Alternative Designs for Carbon Border Adjustment Mechanisms”

Job Market Paper

Latest Draft: October 2023

- Analyzed welfare and emissions impacts of different carbon border adjustment mechanism (CBAM) designs when a country unilaterally imposes carbon pricing using a quantitative multi-country, multi-sector general equilibrium model.
- Calibrated the model with data on trade, production, emissions, and environmental taxes from WIOD, UNCTAD, EUROSTAT, and OECD.

Title: “Panel Regression with Endogenous Regime Switching”, with Yoosoon Chang and Joon Y. Park

- Developed a new approach to model panel regressions with endogenous regime switching using an autoregressive latent factor.
- Performed extensive maximum likelihood estimation and non-linear regularized regressions to detect the environmental and macroeconomic factors influencing the state of the economy, captured by stock excess returns, through IU supercomputing systems, Slurm batch processing, and programming in MATLAB.

Title: “On the Effectiveness of LSTM Models in Predicting Inflation Rates”, with Yoosoon Chang and Joon Y. Park

- Examined the predictive performance of Long-Short Term Memory (LSTM), a recurrent neural network, model to forecast U.S. inflation rate using FRED-MD data set, from January 1960 to July 2023.
- Forecasted inflation with Principal component regression, ARIMA, Random Walk, LASSO, ALASSO, Ridge, Elastic net and Random Forest ML models by using Python.

Title: “Revenue Mobilization for a Resilient and Inclusive Recovery in the Middle East and Central Asia”,

In Collaboration With the Fiscal Policy Group, Middle East and Central Asia Department, International Monetary Fund (IMF)

- Assessed tax capacity, identified key determinants, and estimated tax revenue gaps and inefficiencies in MCD countries, using a stochastic tax frontier model for panel data with time-variant inefficiency, primarily using R and Stata.

EDUCATION

Indiana University, Bloomington, IN, USA

Fall 2018 – Spring 2024 (Expected)

Doctor of Philosophy, Economics (*F1-visa, STEM certified 3-year OPT*)

Sharif University of Technology, Tehran, Iran

Fall 2013 – Spring 2018

Bachelors of Science, Mechanical Engineering (*with Minor in Economics*)

EXPERIENCE

McKinney Climate Fellow, Office of Sustainability, City of Indianapolis

Summer 2023

- Development of a community-wide greenhouse gas inventory and preparing CDP reporting for Marion County for 2022.

International Monetary Fund (IMF) Fund Internship Program, International Monetary Fund

2021

- Employed a diverse set of econometric models to assess tax capacity and estimate tax revenue gaps, while discussing policies to gradually raise tax revenue in MCD countries. Research results presented at IMF MCD department.

Associate Instructor for Business Statistics Coursework, Indiana University

8 Semesters

- Taught as sole instructor for in-person and hybrid mode, Designed curriculum, presentation materials, assessments, etc.

Teaching Assistant, Department of Economics, Indiana University

4 Semesters

- Courses: Business Statistics, Intro to Applied Microeconomics, Fundamentals of Economics I
